# Quality Engineer

IN-Pune                                                                                                    2 weeks ago

**Job ID**  81964        **Category**  Quality Engineering

## Job summary

The Red Hat Quality Engineering (QE) team is looking for a Quality Engineer to join us in Pune, India. In this role, you will have the opportunity to make a difference in the Red Hat customer experience. You'll gain a deep understanding of a variety of technologies and practices, including Software-as-a-Service (SaaS), continuous integration (CI) and continuous delivery (CD), and shift-left testing. You will work closely with developers and the rest of the team to ensure that our solutions fulfill the highest possible enterprise quality, performance, usability, and supportability criteria. As a Quality Engineer, you will create and carry out test plans, research new features, develop automated tests, and maintain and enhance test frameworks. You'll need to have the ability to think creatively and adapt to rapid change, as well as the willingness to learn new things.

## Primary job responsibilities

- Participate actively in design reviews and story grooming to understand new features and bug fixes
- Create test plans and test cases
- Develop new automated and manual tests; develop and maintain automation frameworks
- Help maintain and improve our continuous testing approach
- Participate in and perform root cause analyses of issues to get a starting point to address problems
- Serve as an internal advocate for our customers
- Take shared responsibility with one or two other quality engineers for a customer-facing application and help execute its successful testing in a timely manner
- Provide release readiness information to stakeholders; be able to communicate your risk assessment to them
- Learn and adapt to new technologies quickly

## Required skills

- 2 years of experience in QE
- Bachelor's or master's degree in computer science or a related engineering field, or relevant professional experience
- Ability to design and code complex test cases and to code or contribute code to frameworks which simplify test development and automation
- Ability to write complex test plans for features and provide usable time estimates for completion;

Red Hat supports individuals with disabilities and provides reasonable accommodations to job applicants. If you need assistance completing our online job application, email application-assistance@redhat.com. General inquiries, such as those regarding the status of a job application, will not receive a reply.
